

LECTURE NOTES

4H Continuum Mechanics and Elasticity

School of Mathematics and Statistics

University of Glasgow

2016-2017

Contents

1 Preliminaries	1
1.1 Finite-dimensional vector spaces	1
1.2 Euclidean vector space	2
1.3 Three-dimensional Euclidean space	3
1.4 Change of basis	6
1.5 Euclidean point space: Cartesian coordinates	8
2 Cartesian tensors	10
2.1 Second-order Cartesian tensors	10
2.2 Eigenvalues and eigenvectors of a second-order tensor	14
2.3 Symmetric second-order tensors	15
2.4 Antisymmetric second-order tensor	15
2.5 Cartesian tensors of higher order	16
2.6 Isotropic tensors	18
3 Kinematics	20
3.1 Bodies, configurations and motions	20
3.2 The material time derivative	21
3.3 Differentiation of Cartesian tensor fields	22
3.4 Deformation gradient	23
3.5 Deformation of area and volume elements	24
3.6 Some results from tensor algebra	26
3.6.1 The square root theorem	26
3.6.2 The polar decomposition theorem	26
3.7 Analysis of deformation	27
3.7.1 Stretch, extension, shear and strain	27
3.8 Homogeneous deformations	28
3.8.1 Simple elongation	28
3.8.2 Pure dilatation	28
3.8.3 Pure shear	29
3.8.4 Simple shear	29
3.9 Analysis of motion	30
3.9.1 Stretching and spin	32
3.10 Integration of tensors	33
3.11 Transport formulas	33
4 Balance laws and equations of motion	35
4.1 Mass	35
4.2 Mass conservation	36
4.3 Force, torque and momentum	36
4.4 Body and surface forces	36
4.5 Momentum and angular momentum	37
4.6 Euler's laws of motion	38
4.7 The theory of stress	38
4.8 Cauchy's theorem	38
4.9 Normal and shear stresses	41

4.10	Energy	42
4.11	Stress tensors	43
5	Constitutive equations	45
5.1	Constitutive assumptions	45
5.2	Elastic materials	45
5.3	Objectivity	46
5.4	Material symmetry	47
	5.4.1 Important example: isotropy	48
	5.4.2 Example: Noll's rule	49
5.5	Isotropic functions of a second-order tensor	49
5.6	Isotropic elasticity	52
5.7	Hyperelastic materials	53
5.8	Stress-deformation relations for an isotropic hyperelastic material	55
5.9	Stress-deformation relations in terms of the principal invariants of the left stretch tensor \mathbf{V}	57
6	Linear elasticity	58
6.1	Equations of motion	58
6.2	Elasticity tensor	59
6.3	Isotropic linear elasticity	60
6.4	Equation for the displacement vector	62
6.5	Pure homogeneous deformations	63
6.6	Purely normal stress	63
6.7	Uniaxial tension	64
6.8	Pure shear	65
6.9	Values of the elastic constants	65
6.10	Spherical symmetry	66
6.11	Example: spherical pressure vessel	67
6.12	Example: self-gravitating sphere	68
6.13	Progressive waves	69
